Subject: Proposal for Trail Water Bar Improvements

The Sno Bees respectfully submits this proposal to the Barre City Cow Pasture Committee for review and approval. Following an inspection of the trail's existing water bars, we identified an approach intended to improve drainage performance while minimizing disturbance and maintaining a natural appearance.

Purpose

The purpose of this work is to contour and improve the existing water bars so they manage trail runoff more effectively and blend more naturally with the surrounding trail corridor.

Proposed Work

- Bring a small machine (mini exacavator) onto the trail to access the existing water bars.
- Remove rocks that interfere with the proposed improvements and currently present a hazard to snow-grooming equipment. Removing these rocks will allow for safe grooming of the trail during the snowmobile season.
- Contour and improve the existing water bars rather than create new drainage features.
- Perform the work with minimal disturbance to the trail and surrounding area.

The Sno Bees will provide all work described in this proposal at no cost to the City of Barre.

Request for Approval

Sno Bees requests the Barre City Cow Pasture Committee's approval to proceed with the work described above. We will coordinate the timing of the work with the Committee and comply with any reasonable conditions included in its approval.

Respectfully submitted,

Paul Systo, Trails Coordinator
